HDCVI Full-Color Camera

User's Manual

V1.0.0

Regulatory Information

The regulatory information herein might vary according to the model you purchased. Some information is only applicable for the country or region where the product is sold.

FCC Information

⚠ CAUTION

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC conditions:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

● This device may not cause harmful interference.
● This device must accept any interference received, including interference that may cause undesired operation.

FCC compliance:

This equipment has been tested and found to comply with the limits for a digital device, pursuant to part 15 of the FCC Rules. This equipment generate, uses and can radiate radio frequency energy and, if not installed and used in accordance with the guide, may cause harmful interference to radio communication.
● For class A device, these limits are designed to provide reasonable protection against harmful interference in a commercial environment. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
● For class B device, these limits are designed to provide reasonable protection against harmful interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
    ● Reorient or relocate the receiving antenna.
    ● Increase the separation between the equipment and receiver.
    ● Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
    ● Consult the dealer or an experienced radio/TV technician for help.

General

This user's manual (hereinafter referred to be "the Manual") introduces the functions, installation, and operations of the camera.

Safety Instructions

The following categorized signal words with defined meaning might appear in the Manual.

Signal Words	Meaning
⚠ WARNING	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
⚠ CAUTION	Indicates a potential risk which, if not avoided, could result in property damage, data loss, lower performance, or unpredictable result.
⊙ TIPS	Provides methods to help you solve a problem or save you time.
📖 NOTE	Provides additional information as the emphasis and supplement to the text.

Revision History

No.	Version	Revision Content	Release Date
1	V1.0.0	First release.	August 13, 2018

Privacy Protection Notice

As the device user or data controller, you might collect personal data of others such as face, fingerprints, car plate number, Email address, phone number, GPS and so on. You need to be in compliance with the local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures include but not limited to: providing clear and visible identification to inform data subject the existence of surveillance area and providing related contact.

About the Manual

- The Manual is for reference only. If there is inconsistency between the Manual and the actual product, the actual product shall prevail.
- We are not liable for any loss caused by the operations that do not comply with the Manual.

- The Manual would be updated according to the latest laws and regulations of related regions. For detailed information, see the paper manual, CD-ROM, QR code or our official website. If there is inconsistency between paper manual and the electronic version, the electronic version shall prevail.
- All the designs and software are subject to change without prior written notice. The product updates might cause some differences between the actual product and the Manual. Please contact the customer service for the latest program and supplementary documentation.
- There still might be deviation in technical data, functions and operations description, or errors in print. If there is any doubt or dispute, please refer to our final explanation.
- Upgrade the reader software or try other mainstream reader software if the Manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and the company names in the Manual are the properties of their respective owners.
- Please visit our website, contact the supplier or customer service if there is any problem occurred when using the device.
- If there is any uncertainty or controversy, please refer to our final explanation.

Important Safeguards and Warnings

⚠ CAUTION

Electrical Safety

- All installation and operation should conform to your local electrical safety codes.
- The power source shall conform to the requirement of the Safety Extra Low Voltage (SELV) standard, and supply power with rated voltage which conforms to Limited power Source requirement according to IEC60950-1. Please note that the power supply requirement is subject to the device label.
- A readily accessible disconnect device shall be incorporated in the building installation wiring.
- Make sure if the camera power adapter meets the camera operating voltage requirement before powering up the device (The material and length of the power cable might influence the device voltage).
- Prevent the power cable from being trampled or pressed, especially the plug, power socket and the junction extruded from the device.
- We assume no liability or responsibility for all the fires or electrical shock caused by improper handling or installation.

Environment

- Do not aim the device at strong light to focus, such as lamp light and sun light.
- Transport, use and store the device within the range of allowed humidity and temperature.
- Keep the camera away from water or other liquid to avoid damages to the internal components.
- Keep sound ventilation to avoid heat accumulation.
- Heavy stress, violent vibration or water splash are not allowed during transportation, storage and installation.
- Pack the device with standard factory packaging or the equivalent material when transporting the device.
- It is recommended to use the device together with lightning arrester to improve lightning protection effect.
- It is recommended to get the grounding holes to be grounded to enhance the reliability of the device.
- It is recommended to use qualified video transmission cable to improve video quality. It is recommended to use RG59 coaxial cable or higher standard.

⚠ WARNING

- Use standard components or accessories provided by manufacturer and make sure the device is installed and maintained by professional engineers.
- The surface of the image sensor should not be exposed to laser beam radiation in an environment where a laser beam device is used.
- Do not provide two or more power supply sources for the device; otherwise it might damage the device.
- When the camera is in the condition of PoC power supply, do not connect any other device between the camera and PoC transceiver including UTC, Balun, optical transceiver, distributor and convertor and so on; otherwise, the device might get burned.
- PoC supply voltage is up to 52V. Do not dismantle the device during normal operation; otherwise it might cause danger to both device and users due to high voltage.

Table of Contents

1 Introduction

1.1 General

This series of products comply with the HDCVI standard and support the transmission of video and control signal over coaxial cable. They produce video signal with megapixel resolution and require XVR devices that comply with the HDCVI standard to achieve high speed, long distance, and zero lag transmission of the signal. They are applicable to cover the high definition monitoring needs for locations like financial center, telecom site, supermarket, hotel, government, school, and factory.

1.2 Features

- 720p series support over 800 m real-time transmission of video and control signal from RG59 cable; for 1080p to 4k series, the distance is 500 m.
- Excellent low-light performance and full color images with smart light technology.
- Configure devices easily with OSD menu.
- Support switching between HD and SD outputs.

2.1 Dimension

Figure 2-1 Model A (mm [inch])

Figure 2-2 Model B (mm [inch])

Figure 2-3 Model C (mm [inch])

2.2 Components

Figure 2-4 Model A, B and C
Table 2-1 Component list of model A, B and C

| No.	Component Name	No.	Component Name
①	Fill light	②	MIC

2.3 Cable

📖

Cable type might vary with different cameras, and the actual product shall prevail.

Figure 2-5 Cable port list

For more information about cable ports, see Table 2-2; for the operation method of ④ (DIP switch), see Table 2-3.

Table 2-2 Cable port description

No.	Port Name	Function
①	12V DC power input	Inputs 12V DC power. Please be sure to supply power as instructed in the Manual. ⚠ Device abnormity or damage could occur if power is not supplied correctly.
②	Video output	Connects to XVR to output video signal.
③	Audio input	Connects to sound-pick-up devices to receive audio signal.
④	DIP switch	Dial switches to change output mode. Switch up indicates "ON", and switch down indicates "OFF."

Table 2-3 Operation of DIP switch

Switch1	Switch2	Output Mode
OFF	OFF	CVI
ON	ON	CVBS
ON	OFF	AHD
OFF	ON	TVI

3 Installation

⚠

- Make sure the mounting surface is strong enough to hold at least three times of the camera weight.
- Keep the protection film on the camera before installation and adjustment finished to avoid possible scratch.
- Properly handle the device after unpacking. Do not expose the device in humid environment.

📖

The following figures are for reference only, and the actual product shall prevail.

For the installation of model A, see "3.1 Installing Model A"; for the installation of model B, see "3.2 Installing Model B"; for the installation of model C, see "3.3 Installing Model C."
3.1 Installing Model A

Figure 3-1 Model A installation

Table 3-1 Installation item list

No.	Item	No.	Item	No.	Item
①	Mounting surface	②	Positioning map	③	Expansion bolt
④	Pedestal	⑤	Self-tapping screw	⑥	Device
⑦	Enclosure	⑧	Locking screw	—	—

Step 1 Loosen the locking screw⑧ with the supplied wrench, and then take off the pedestal ④.

Step 2 Confirm position of screw holes (and the cable outlet hole if it needs to go through the mounting surface①) as the positioning map② indicates, then drill the holes on the mounting surface①, and then insert the expansion bolts③ into the screw holes.

Step 3 Align the screw holes on the pedestal④ to those on the mounting surface①, and then pull the cable out through mounting surface or the side cable tray. Attach the pedestal ④ to the mounting surface① with the self-tapping screws⑤.

Step 4 Put the locking screw⑧ and the enclosure⑦ back to hold the device⑥, and then connect the camera to power source and the XVR device. The live view screen is displayed.

Step 5 Aim the lens to the ideal angle, and then fasten the locking screw. See Figure 3-2.

Figure 3-2 Model A adjustment

In Figure 3-2, ① is the locking screw.

3.2 Installing Model B

Figure 3-3 Model B installation

Table 3-2 Installation item list

No.	Item	No.	Item
①	Device	②	Self-tapping screw
③	Expansion bolt	④	Mounting surface

Step 1 Confirm the position of screw holes (and the cable outlet hole if it needs to go through the mounting surface④), then drill them on the mounting surface④, and then insert the expansion bolts③ into the screw holes.

Step 2 Align the screw holes on the bracket to those on the mounting surface④, and then pull the cable out through mounting surface or the side cable tray. Attach the bracket to the mounting surface④ with the self-tapping screws②.

Step 3 Connect the device① to power source and the XVR device, and then the live view screen is displayed.

Step 4 Aim the lens to the ideal angle, and then fasten the locking screws. See Figure 3-4.

Figure 3-4 Model B adjustment

In Figure 3-4, ① represents the locking screws.
3.3 Installing Model C

Figure 3-5 Model C installation

Table 3-3 Installation item list

| No.	Item	No.	Item	No.	Item
①	Device	②	Self-tapping screw	③	Expansion bolt
④	Positioning map	⑤	Mounting surface	—	—

Step 1 Confirm the position of screw holes (and the cable outlet hole if it needs to go through the mounting surface⑤) as the positioning map④ indicates, then drill the holes on the mounting surface⑤, and then insert the expansion bolts③ into the screw holes.

Step 2 Align the screw holes on the bracket to those on the mounting surface⑤, and then pull the cable out through mounting surface or the side cable tray. Attach the bracket to the mounting surface⑤ with the self-tapping screws②.

Step 3 Connect the device① to power source and the XVR device, and the live view screen is displayed.

Step 4 Aim the lens to the ideal angle, and then fasten the locking screws. See Figure 3-6.

Figure 3-6 Model C installation
In Figure 3-6, ① is the locking screw.

4 General Configuration

Power up the camera and connect it to XVR device with coaxial cable, and then the live view screen is displayed. The following instructions will guide you to configure your camera.

📖

- The number of the coaxial port on XVR will display at the lower left corner of each window to indicate the corresponding camera.
- Interfaces of different XVR might vary, and the actual product shall prevail.

4.1 Opening Main Menu

Step 1 In the live view screen interface, right-click anywhere on the screen.
The shortcut menu is displayed. See Figure 4-1.

Figure 4-1 Shortcut menu
Step 2 Click **Main Menu**.
The **Main Menu** interface is displayed. See Figure 4-2.

Figure 4-2 Main menu

Right-click anywhere on the screen to return to the previous interface until it goes back to live view screen.

4.2 Setting Audio Input

Audio signal acquisition is available on select models.

Step 1 In the **Main Menu** interface (Figure 4-2), select **CAMERA > ENCODE > Encode**.
The **Encode** interface is displayed. See Figure 4-3.
Figure 4-3 Encode settings

Step 2 In the **Channel** list, select the camera that you want to configure according to the coaxial port number.

Step 3   In the **Main Stream** column, click **More Setting**.

The **More Setting** interface is displayed, see Figure 4-4.

Figure 4-4 More setting

Step 4   In the **More Setting** interface, you can configure the audio settings.
  ● Enable **Audio Encode** function.
  ● In the **Audio Format** list, leave to the default.
  ● In the **Audio Source** list, select **HDCVI**.

Step 5   Click **Save** to save the settings.

The **Encode** interface is displayed (Figure 4-3).

Step 6   In the **Encode** interface (Figure 4-3), click **Apply**.
4.3 Operating OSD Menu

The OSD menus of different cameras might vary, and the actual product shall prevail.

Step 1   In the shortcut menu (Figure 4-1), click **PTZ**.

The PTZ setting interface is displayed. See Figure 4-5.

Figure 4-5 PTZ setting

Step 2   Click ▶ to see more options. See Figure 4-6.

Figure 4-6 PTZ setting options

Step 3   Click .

The **MENU OPERATION** panel is displayed. See Figure 4-7.
The OSD menu of the corresponding camera is displayed on the live view screen.
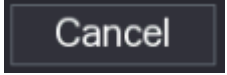

Figure 4-7 Menu operation panel

For functions of the buttons in the **MENU OPERATION** panel, see Table 4-1.

Table 4-1 Menu operation panel function

Button	Function	Button	Function
Enter	Enter or confirm an item	▲ , ▼	Select item
Cancel	Exit OSD menu	◀ , ▶	Change item value

If there is "↵" as the value of an OSD item, click **Enter** to go to the next level of this item. Click **Return** to go back to the previous level. Clicking **Cancel** is to exit OSD menu without saving the modifications.

5 Configuring Light

This chapter introduces how to configure the working status of the light. And the working status contains smart light mode and manual mode. Open the OSD menu and you can do the following operations.

5.1 Enabling/Disabling Light

It's set by default that the light is enabled and at smart light mode. To disable the light, you can select **Light > Off**.

5.2 Configuring Smart Light Mode

In the smart light mode, you can configure the maximum brightness level of the smart light, and it will change brightness automatically according to the ambient lighting condition. You can also configure the sensitivity of turning on/off the smart light.

Configuring Brightness Level

Step 1 Select **Light > Smart Light > Level**.
Step 2 Select from **1** to **5** to configure the maximum brightness level, and the smart light changes brightness from **1** to the defined level.

The default maximum brightness level is 5.

Step 3 Click **Return/Exit** and the **Save** interface is displayed.
Step 4 In the **Save** interface, you can:
- Click **Yes** to save your configuration.
- Click **No** to give up your configuration.
- Click **Cancel** to still stay in the **Return/Exit** interface.

Configuring Sensitivity

Step 1 Select **Light > Smart Light > Sensitivity**.
Step 2 Select from **1** to **5** to configure the sensitivity value of the smart light.
The lower the value is, the easier the smart light will be to be woken up.

The default sensitivity value is 3.

Step 3 Click **Return/Exit** and the **Save** interface is displayed.
Step 4 In the **Save** interface, you can:
- Click **Yes** to save your configuration.
- Click **No** to give up your configuration.
- Click **Cancel** to still stay in the **Return/Exit** interface.

5.3 Configuring Manual Mode

You can configure a fixed brightness level of the light. After the configuration, the light will be constantly on with a fixed brightness.

Step 1 Select **Light > Manual > Level**.

Step 2 Select from **1** to **5**.

The higher the level is, the brighter the light will be.

📖

The default brightness level is 3.

Step 3 Click **Return/Exit** to exit the configuration.

Step 4 In the **Save** interface, you can:

- Click **Yes** to save your configuration.
- Click **No** to give up your configuration.
- Click **Cancel** to still stay in the **Return/Exit** interface.

⚠️

In order to maintain the image quality and proper functioning of the device, please read the following maintenance instructions carefully and hold rigid adherence.

Disassembly and Desiccant Replacement

● Carefully follow the instructions in the manual when performing any disassembly operation about the device; otherwise, it might cause water leakage or poor image quality due to unprofessional disassemble.

● Please contact after-sale service for desiccant replacement if there is condensed fog found on the lens after unpacking or when the desiccant turns green. (Not all models are included with the desiccant).

Maintaining Lens and Mirror Surface

● The lens and mirror surface are covered with antireflection coating, which could be contaminated or damaged and result in lens scratches or haze image when being touched with dust, grease, fingerprints and other similar substances.

● Do not touch the image sensor directly (CCD or CMOS). Dust and dirt could be removed with air blower, or you can wipe the lens gently with soft cloth that moistened with alcohol.

Maintaining Device Body

● Device body can be cleaned with soft dry cloth, which can also be used to remove stubborn stains when moistened with mild detergent.

● To avoid possible damage on device body coating which could cause performance decrease, do not use volatile solvent such as alcohol, benzene, diluent and so on to clean the device body, nor can strong, abrasive detergent be used.
